Navigating Values and Visibility  
in Academia and Beyond

**Barack Obama**   
@BarackObama

You've got a lot to be proud of, Jiwandeep. Thanks for everything you do to make this country a little more equal. Turban looks great, by the way. Happy Pride Month, everybody!

**Jiwandeep Kohli** @jiwandeepkohli

I'm proud to be a bisexual bearded baking brain scientist. I feel fortunate to be able to express all these aspects of my identity, and will continue to work toward ensuring the same freedom for others.

# Vorstellung

**Alli Kamalanathan**

Education Innovation Lab

**NewComm is a community-based, learner-centered ecosystem that empowers underserved learners with the tools, confidence, and network to build transformational futures for themselves and their communities.**

### WHAT ARE COMMUNITY-BASED, LEARNER-CENTERED ECOSYSTEMS?

Community-based, learner-centered ecosystems are reconceived public education system designs that are emerging across the nation. In this design, K-12 learning is shaped, distributed and networked throughout communities, versus set in singular school buildings. Young people craft and navigate their learning journeys through meaningful collaboration with adults who support them, as well as their peers. The experience of that learning leverages the assets, insights and expertise of a wide variety of organizations and people. It prioritizes learning that is tangible, rooted in context and intrinsically tied to each young person's interests, aspirations and personal relevance.

# What We Offer

- NewComm is a design studio that engages learners, experienced professionals, and local stakeholders in year-long projects that address essential questions in their community.
- Each project starts with an immersive summer literacy-focused experiences followed by a series of Saturday design thinking workshops where learners leverage their summer and current school's education to execute a venture that addresses the essential question.
- The “software” of our projects is the “Literary Science” framework where stories, oral histories, and generational knowledge from marginalized voices are studied not just mere words for an assessment but as powerful research and design tools for social justice.
- This work will increase engagement in literacy skill development, provide robust professional experiences, but also empower learners to perceive their engaged education as a tool for “informed agitation” of unhealthy systems.

# 11th grade: FELLOWS

- A paid community-engaged project where students leverage literary science to design, refine, and execute a \$10,000 project that answers the following essential question:
  - *How can we disrupt the systematic economic disparities in our community by leveraging social capital?*

# 12th grade: FUTURES

- A travel-based project where students leverage literary science to explore the African Diaspora to design, refine, and execute individual projects.
  - *How can our experiences with non-western approaches to justice create a more inclusive and innovative communities back home?*
